LEARNING OBJECTIVES

• At the end of this presentation, the learner will be able to:
  • State 3 differences between the worlds of nursing research, EBP, and QI
  • Describe 2 methods to achieve the unique objectives of research, EBP, and QI worlds
CONCEPT OF RESEARCH

The world of research is not isolated activities or tasks

- Surveys, interviews, and observations
- Data collection
- Statistical analysis
- Improvement processes
- Evidence-based practice changes
CONCEPT OF RESEARCH

Research is a rigorous, reproducible, and systematic process that may involve all or part of those tasks and activities.
A rigorous & systematic process

- Generates **new knowledge through the application of basic scientific principles and theory development**
- Overarching **intent** of research is description, prediction, and control
- **Asks** “What is not known?”
- **Final Product:** New knowledge that can be generalized in appropriate patient populations
THE PROCESS OF KNOWLEDGE DEVELOPMENT

(OMERY, 1998)

Analysis
Synthesis

Data (Organized Data) → Facts (Structured & Integrated Facts that are Meaningful) → Information

Systematic Process

The quality process IS the systematic process that produces information.

The research process IS the systematic process that produces scientific knowledge.
A systematic process

- Implements and evaluates interventions stemming from new knowledge generated by research
- Overarching intent of EBP changes is to integrate scientific discoveries into healthcare practice
- Asks “What is known?” and “What can be done with this knowledge?”
- Final Product: Systems change and outcome improvement in patient populations
A structured process that:

- Evaluates a specific system’s strengths and limitations, systems parts, and resulting outcomes
- Overarching intent: Improve processes specific to local systems + patient outcomes
- Asks “What is happening?” and “How can it be improved?”
- Final Product: Information; may contribute new learning & practices
TRANSLATIONAL RESEARCH

A systematic process

- **Investigation** sourced from evidence (including theory testing) or previous research
- Overarching **intent** is the application of new knowledge
- **Asks** “What is safe?” and “What works?”
- **Final Product**: New knowledge to explain or improve clinical practice
FACTORS NECESSARY FOR SUCCESS: #1

Successful research studies, EBP projects, QI projects always have these 2 elements:

- A **committed team** (not 1 or 2 people) with a passion for the clinical problem
  - Teams members with various talents, expertise, and research experience
FACTORS NECESSARY FOR SUCCESS: #2

An expert researcher, EBP mentor, or QI/PI mentor to ensure a systematic and evidence-based approach, who is either:

• Part of team OR
• A consultant for the team

©Kaiser Permanente
RESEARCH, EBP, QI

**Similarities**
- Start with data and analysis
- Have a defined process
- Committed team for success
- Contributes to knowledge & outcome improvement

**Differences:**
- Structures
- Processes
- Intent
- Outcomes
- Data required

CASE STUDY: HOSPITAL ACQUIRED PRESSURE ULCERS

Research • Intent: Learn via retrospective chart review

EBP • Intent: Integrate new scientific knowledge into clinical practice

QI • Intent: Identify changes to achieve goals
A systematic process

- **What is not known:** 2010 Unavoidable Pressure Ulcers: A Causal Model (Primary Investigator, SCAL PI Anna K. Omery, NCAL PI Gretchen Summer)
  - Retrospective chart review
  - Adult ICU patients
  - Statistical analysis of variables

- Descriptive, predictive, & controlled
RESEARCH EXAMPLE

• Scientific knowledge via a rigorous and systematic research process
  • Data
  • Facts
  • Synthesized Information
  • Knowledge

• Final Product = New knowledge that can be generalized for adult ICU patients in the U.S. at risk of HAPU development
EBP EXAMPLE

Pre-albumin Screening to Decrease Hospital Acquired Pressure Ulcers

• KP Los Angeles Medical Center

• What is known: Monitoring pre-albumin levels can be used as a screening tool to identify patients at risk for HAPU and plan nutritional interventions

©Kaiser Permanente
EBP EXAMPLE

Pre-albumin Screening to Decrease Hospital Acquired Pressure Ulcers

Final Outcomes:
• Decreased HAPU hospital-wide
• Improved QOL, decreased pain, cost, & LOS

• Systematic integration of new knowledge into nursing practice
• Maximize patient’s nutritional regime
1. Analyzed baseline data = 12 in 4 months
2. Set SMART goal: PCU will reduce the number of HAPUs from average of 2/month to no more than 1/month by Sept 30, 2010
3. Assessed current practices and identified potential changes
   - Better skin assessment skills: Use 2 nurses
   - Better risk assessment: Create assessment tool
   - WOCN as clinical expert and resource
   - Investigated other practices/interventions
QI/PI EXAMPLE

PCU HAPU Project
C chart
Set 1: UCL = 1.89, Mean = 0.28, LCL = none (4/1/2010 - 10/1/2010)

- Learning about patients actively dying
- Began using tool on all pts. (admits, transfers & weekly)
- Started UBT project
- Began doing 4 eyes on all patients

Chart created by Patricia Johnson
FOOD FOR THOUGHT

• How have YOU used research, EBP, or QI to improve nursing care?

• What challenges have YOU faced determining when to use research or EBP or QI?
SAN DIEGO SOLAR SYSTEM

Research
• Charge Nurses (CNs) and Patient Safety (Heather Cathro, PhD, RN)

EBP
• Bathing with CHG wipes in ICU

QI
• VAP Bundle
CHARGE NURSES + PATIENT SAFETY

Question: What actions and processes do CNs on medical-surgical nursing units implement to keep patients safe?

Intent: Explore actions processes CNs implement to keep patients safe.
Using semi-structured interviews + observations, 3 themes and a substantive theory were created.

**Final Outcome: Navigating through Chaos**

CNs balance multiple rules, maintain a watchful eye, and work with and leading health care teams to keep patients safe.
CHG BATHING WIPES IN ICU

2010: Implemented CLASBI evidence-based protocol

• CHG bathing wipes

4th Q 2010-2015: 2 CLABSI incidents, with 3 consecutive years of 0 incidents
VAP BUNDLE

• Implemented evidence-based VAP Bundle in 2011, Qtr 1
• NO ventilator associated pneumonia since Oct 2011
Nurses ensure high quality and safe patient care through the worlds of research, EBP, and QI
GALACTIC SUMMARY

- Research, EBP, and QI vary in structure, intent, processes, outcome, data requirements

- Both have similarities:
  - Start with data
  - Conduct an analysis
  - Need a committed team
  - Rely on experts for guidance

©Kaiser Permanente
WONDERFUL WORLD OF DATA

• Data transcends international boundaries, cultures, language

• The wonderful world of data offers nurses the opportunity to see the quantitative and qualitative results of research, EBP, and QI related to patient care...But...
WONDERFUL WORLD OF DATA

...Nurses see yet another world...

We see a world with human beings - patients, families, and others - who are hidden in the data
